

# phpList plugins

Your phpList can be extended, adapted and customized by the use of plugins.

You can:

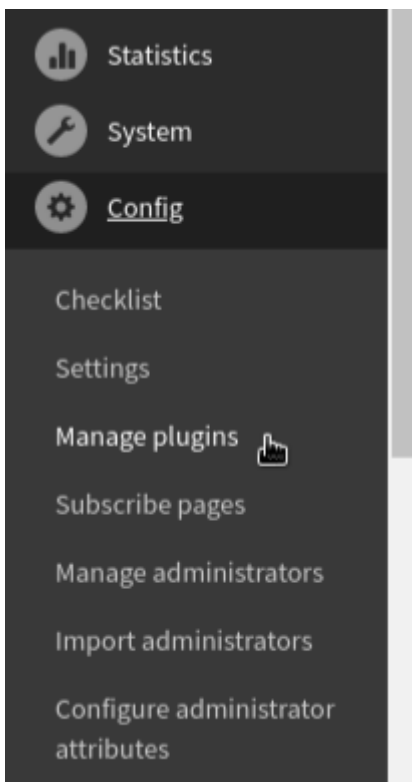

- Use plugins from the **phpList plugin library**, which are developed by the phpList community
- Develop your own plugin, or pay a developer to build it for you
- Contribute your plugin back into the plugin library.

This chapter will show you how to install, enable/disable and delete a plugin.

In the example used, we will change the choice of editor used in our install by installing the CKEditorPlugin and disabling the fckphplist plugin.

## The plugins page

To get to the plugins page from the main menu, click **Config > Manage plugins**.

You will see a list of the plugins you currently have installed. To find a new plugin, click the **Find plugins** link.

## Install a new plugin

[Find plugins](#)

Plugin package URL

Install plugin

The plugin library will then open in a new page. You can access the Plugin library at <https://resources.phplist.com/plugins/start>

<https://resources.phplist.com/plugins/start>

plugins:start

### Plugins for phpList 3

Below are published plugins for phpList 3 from a variety of authors, including community members and phpList Ltd. You can add your own phpList plugin here by posting links on the phpList Forum.

[Search](#)

Filter by tag

attribute editor placeholder prefix spam

Filter by type

All available (45)

	Author	Last Update	Popularity
Compatible with older versions			
<b>Addons plugin</b> This plugin adds some small features to phplist.  Provides: Tags: <a href="#">Duncan Cameron</a>			<input type="text"/>
<b>Amazon SES plugin</b> This plugin sends email through Amazon SES using its API. This is for phplist 3.x.  Provides: Tags: <a href="#">Duncan Cameron</a>			<input type="text"/>
<b>Attribute Select plugin</b> Segment sending to your subscribers based on attribute values.  <a href="#">Download</a>			<input type="text"/>

# Getting the plugin URL from the plugin library

Once you have clicked the **Find plugins** link, you will see the plugin library. Scroll down or search to find the desired plugin.

In this example, we are installing the "Attribute Select Plugin".

Right click on the **Download** link and choose the option to copy the URL. The wording of this option will depend on your browser: in this case it reads **Copy Link Location**.

# Installing the plugin

Return to your phpList (it should be in the browser tab to the left of the plugin library). Paste the url into the box labelled **Plugin package URL** and click the **Install plugin** below.

## Manage plugins

### Install a new plugin

Find plugins

Plugin package URL

Install plugin

You will see the plugin install. Click **Continue**.

## Manage plugins

Fetching plugin

Developer: michield

Project: phplist-plugin-attributeselect

Installing plugin

simpleattributeselect.php new plugin

Plugin installed successfully

# Turning plugins on and off

Once you are on the plugins page, either from **Config > Manage plugins** on the main menu, or after installing a plugin and clicking **Continue**, you can turn plugins on or off.

A green tick icon indicates that the plugin is enabled (on), and a red round icon indicates that the plugin is disabled (off).

To disable (turn off) a plugin, click on the "Disable" button on your right.

Plugin	Enabled	Action
CKEditorPlugin	✓	<button>Disable</button>
Details	<b>Name</b> CKEditor plugin <b>Description</b> Provides the CKEditor for editing messages and templates. <b>version</b> 2.2.0+20190206 <b>Update status</b> Plugin must be updated manually <b>More information</b> <a href="#">Documentation Page</a> <b>Configure</b> <a href="#">CKEditor Settings</a>	
CommonPlugin	✓	<button>Disable</button>
Details	<b>Name</b> Common Plugin <b>Description</b> Provides support classes required by some other plugins. <b>version</b> 3.10.4+20190609 <b>Update status</b> Plugin must be updated manually <b>More information</b> <a href="#">Documentation Page</a>	

This will now turn red: the plugin is now disabled.

CKEditorPlugin	✓	<button>Disable</button>
Details	<b>Name</b> CKEditor plugin <b>Description</b> Provides the CKEditor for editing messages and templates. <b>version</b> 2.2.0+20190206 <b>Update status</b> Plugin must be updated manually <b>More information</b> <a href="#">Documentation Page</a> <b>Configure</b> <a href="#">CKEditor Settings</a>	
CommonPlugin	⊘	<button>Enable</button>
Details	<b>Name</b> Common Plugin <b>Description</b> Provides support classes required by some other plugins. <b>version</b> 3.10.4+20190609 <b>Update status</b> Plugin must be updated manually <b>More information</b> <a href="#">Documentation Page</a>
